

ITERATION LOG

Project: School Administration Office Film Set

Phase 1: Conceptual Iteration for Base Prompts

- **Iteration 1.1:** Initial layout mapping. Furniture placement was matched to the base image, but fan models and window frame textures required adjustments to strictly match the reference pack. The initial daylight effect was too flat.
- **Iteration 1.2:** Introduced specific set dressing (files, coffee mugs) and a background administrator for the day scene to fulfill the "active and buzzing" requirement. *Result:* The space felt active but slightly cluttered.
- **Iteration 1.3 (Initial Day Scene):** Adjusted the lighting to include partially open blinds, creating dappled light and depth. Refined set dressing for a cleaner look. Finalized the first working draft of the day prompt.

Phase 2: Director Revisions & Visual Refinements

- **Iteration 2.1 (AC Placement Correction):** Reviewed layout against the strict design direction overlay. *Feedback:* AC units were improperly placed near the windows. *Action:* Repositioned the AC units to the structural bulkheads above the primary glass entryway and the distant office door for realistic functionality.
- **Iteration 2.2 (AC Asymmetry):** *Feedback:* The right-side AC on the bulkhead felt visually crowded in the composition. *Action:* Removed the right-side wall AC, keeping only the left-side AC on the bulkhead for a more balanced, standard architectural look. Generated the finalized Day Render.
- **Iteration 2.3 (Final Night Relight):** *Action:* Transferred the perfectly finalized Day geometry (with correct asymmetrical AC placement) into the Night lighting setup.

Closed the window blinds, disabled natural daylight, and activated the warm, tungsten-amber indirect cove lights and internal profile lights. This established the final dramatic, cinematic mood without altering the approved floor plan. Generated the finalized Night Render.
